ABSTRACT

Title: AI based Personalized Electronic Gadgets Recommendation System

The rapid advancement of technology has led to a vast array of electronic gadgets available in the market, making it increasingly challenging for individuals to select the most suitable options based on their specific preferences and requirements. To address this issue, we present an AI-based personalized electronic gadget recommendation system.

In conclusion, our system is an advanced AI-based personalized electronic gadget recommendation system that leverages machine learning, data analysis, and content-based filtering to provide tailored and accurate gadget recommendations. By harnessing the power of artificial intelligence, our system aims to simplify the process of selecting electronic gadgets, ensuring that users can make informed decisions and find the most suitable devices to meet their needs.

Tools: HTML, CSS, JS, Flask, Python
